Rule 0.14 (Use Immutable Variables for Constructor-Set Values)

```
 \begin{bmatrix} [\ldots] \\ \mathbf{contract} \ A \ \{ \\ T \ var; \\ [\ldots] \\ \mathbf{constructor}(pds) \ \{ \\ var = value; \\ [\ldots] \\ \} \\ \mathbf{function} \ f() \ \mathbf{view} \ \{ \\ [\ldots] \\ \vdots \\ [\ldots] \\ \} \\ [\ldots] \\ \end{bmatrix}
```

## where

var is a state variable of type T in contract A; value is an expression evaluated during contract construction; pds are the constructor parameter declarations; f is a function that reads var.

## provided

The variable var is assigned exactly once in the constructor;

The variable var is never modified after construction;

The type T supports immutable declaration in Solidity;

No write operations to var exist outside the constructor;

The value assigned to var can be determined at deployment time.

## Invariant:

Let  $s_i$  and  $s'_i$  be the initial state of A and A', respectively.

Let  $s_f$  and  $s'_f$  be the state reached by A and A', respectively, after A.f() and A'.f() are executed from  $s_i$  and  $s'_i$ , respectively.

Then, the coupling invariant is

$$\forall s_i, s_i' : (s_i = s_i') \rightarrow (s_f = s_f')$$
